

Reverse the Signs of Aging with Sculptra

REVERSE THE SIGNS OF AGING

SCULPTRA

Roseville Facial Plastic Surgery restores volume to the face using Sculptra for a gradual, natural-looking youthful appearance.

One major sign of aging is the loss of volume in the face. As the body ages, collagen is lost and facial features appear to be sunken in. The good news is there is a non-surgical way to restore volume! Sculptra Aesthetic is a great way to improve the appearance and achieve a youthful glow. Sculptra is designed to increase volume by encouraging the growth of collagen. Results are gradual and can last up to two years. Roseville Facial Plastic Surgery is proud to offer Sculptra to their patients in the Greater Sacramento area. With board-certified facial plastic surgeons and over twenty years of experience, you are bound to receive the best experience possible. You can feel confident in your decision by choosing Roseville Facial Plastic Surgery for your Sculptra treatment. Restore your youthful glow with Sculptra!

What is Sculptra?

Sculptra is a non-invasive injectable used to provide fullness and volume to the face. It is a type of dermal filler that is designed to stimulate the production of collagen in your face. Sculptra is made of poly-L-lactic

acid which is an FDA-approved biocompatible substance. It is naturally absorbed by the body and has been safely used for decades.

Sculptra is best used if you are looking for natural, gradual results. Sculptra is designed to reverse the signs of aging in the face by aiding in the creation of new collagen. The creation of new collagen does not happen overnight, which is why you will see gradual results.

Why Sculptra?

Sculptra is different from other dermal fillers such as Juvederm, Radiesse and Restylane. The main difference is in the fact that Sculptra provides results over time. The other dermal fillers provide more instant results but also do not last as long as Sculptra does. Sculptra can be used in conjunction with other dermal fillers in order to achieve the best results.

Is Sculptra Right for Me?

If hollowed temples, sagging jowls or deep creases are affecting your

appearance, Sculptra may be right for you. It will refill the volume in the contours of the face and leave you with a younger-looking, refreshed glow!

Sculptra can also treat sagging skin on the décolleté and acne scars. It treats all of these conditions by stimulating your body to produce new collagen to add volume to the area being treated. You must be in generally good health in order to receive Sculptra treatment.

Sculptra Procedure

The Sculptra procedure is relatively similar to those of other dermal

fillers. Sculptra is injected into a deeper layer of the skin in order to encourage new collagen growth. A very small needle is still used during the procedure.

Before your procedure, a topical anesthetic will be applied to the treatment area a half an hour before the injections begin. The Sculptra formula includes Lidocaine to ease any discomfort as it is being injected.

Every patient is different so Roseville Facial Plastic Surgery will use their extensive knowledge to let you know how many treatment sessions and dosage of Sculptra you may need. The average number of sessions usually needed to see the best results is three. These treatment sessions are spaced out about six weeks apart.

Sculptra Recovery

There is minimal to no downtime after receiving Sculptra treatment. You may return to your normal activities after the procedure, but should take it easy for the first 24 hours. Some common side effects include minor swelling and bruising for the first few days. After the procedure is complete, ice packs are placed on the treatment area to reduce swelling and bruising. It is recommended to continue the use of ice packs for the first 24 hours to minimize side effects.

After the treatment you must follow the “5-5-5” regimen. For five days following your treatment, you must massage the treatment area five times a day for five minutes each. This helps make sure the Sculptra is being distributed evenly.

Sculptra Results

Immediately following treatment, you may see noticeable results in increased facial volume because of the amount of Sculptra that was injected. This will decrease over the next couple days since Sculptra is designed to produce gradual, long-lasting results. You will begin to see the improvement over the next four to six weeks. Most patients continue seeing great results two years after treatment and are satisfied with their results.

If you are looking to replace lost volume in the face and are located in the Greater Sacramento area, contact Roseville Facial Plastic Surgery at (916) 773-0395 or visit www.rosevillefacialplasticsurgery.com to schedule your consultation.

YOU ARE IN THE BEST OF HANDS WITH ROSEVILLE FACIAL PLASTIC SURGERY

Dr. Kiener has practiced facial plastic surgery for more than 25 years, and he is certified by the American Board of Facial Plastic and Reconstructive Surgery, as well as the American Board of Otolaryngology. He is dedicated to providing natural-looking results for his patients, helping them look and feel better, whether they simply want to improve their appearance, or they're recovering from a complex injury or illness. He regularly attends meetings and seminars to keep up with the latest techniques and products applicable to facial plastic surgery.

In practice for more than 30 years, Dr. Sykes has performed more than 13,500 aesthetic, functional, and reconstruction surgeries on patients of all ages. He designed a patented instrument used by surgeons worldwide to simplify the endoscopic brow lift procedure and provide faster patient recovery times. Dr. Sykes has been director of the Facial Plastic and Reconstructive Surgery Department at UC Davis Medical Center in Sacramento since 1989. As director, he oversees an active medical practice and maintains one of the nation's most sought-after fellowship programs for facial plastic surgeons seeking advanced training.
